Oracle Forms to APEX Analysis

This offering represents the strategic starting point for evaluating and modernizing your Oracle Forms application landscape. It establishes a solid foundation for informed decision making regarding the future transformation of your Oracle Forms environment.

THE INITIAL SITUATION

Oracle Forms applications continue to serve as the backbone of many business-critical processes. They operate reliably and have proven their functional value over time. However, they are increasingly under strategic pressure. Technological evolution is limited, skilled resources are becoming scarce, and ongoing modifications are growing more complex and costly.

THE CHALLENGE

The need for modernization is widely acknowledged. Yet organizations often lack clarity on how to initiate transformation in a structured, risk-controlled manner.

How can common pitfalls of software modernization be avoided?

Where is the most effective starting point for navigating the complexity of migration?

Without transparency and structure, modernization initiatives carry significant technical, financial, and organizational risks.

THE SOLUTION

Before budgets are committed, a robust and fact-based decision framework is essential not theoretical assumptions, but clear visibility into your specific application landscape.

You need to understand what a migration from Oracle Forms to APEX truly entails for your system:

Which components are business-critical?

Where can complexity be reduced?

What simplifications are feasible?

Which modernization strategy best aligns with your organization?

This requires a comprehensive, structured analysis of your existing application, one that provides clarity, measurable insights, and actionable answers to your key questions.

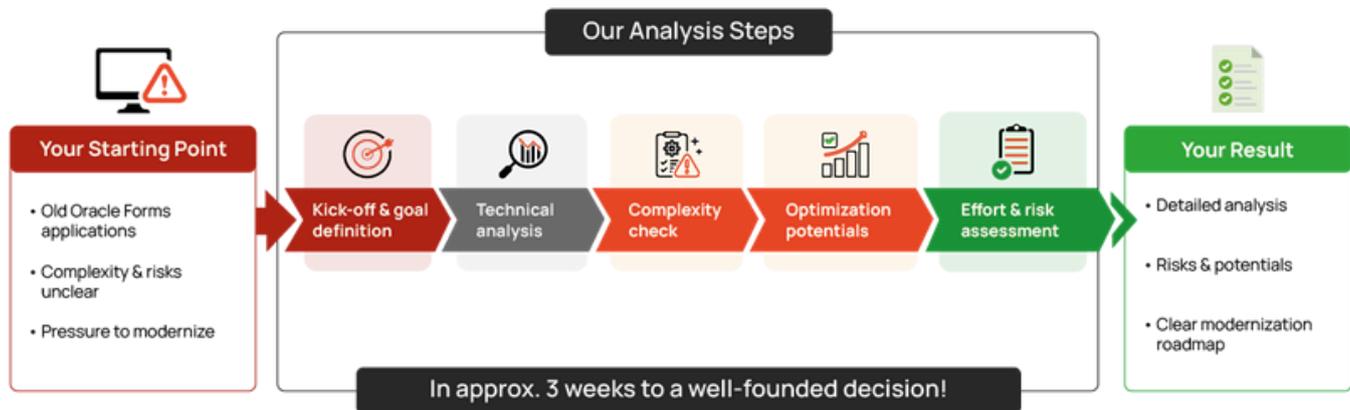

OUR OFFER

With the Forms2APEX Analysis, we create precisely this transparency. The engagement is deliberately designed as a compact, clearly defined entry point with tangible results.

The focus is not on executing the migration itself, but on establishing a well-founded preparation phase technically, functionally, and economically.

Forms To APEX Analyse

The Path to Modernization

APPROACH

Duration: Approximately 3 weeks

Step 1 – Kick-off & Objective Definition

Alignment on vision, scope, success criteria, and organizational framework.

Step 2 – Technical End-to-End Analysis

Comprehensive, tool supported examination of all relevant objects, dependencies, and structural components within your Oracle Forms application.

Step 3 – Complexity & Structural Assessment

Identification of business critical core functionalities, structural redundancies, unnecessary complexity, and obsolete components.

Step 4 – Optimization Potential & Target Architecture

Evaluation of simplification opportunities through APEX standard capabilities, architectural improvements, and strategic refactoring or relocation of business logic.

Step 5 – Effort & Risk Assessment

Derivation of reliable key metrics to support budgeting, prioritization, and strategic planning.

Step 6 – Results Presentation & Roadmap

Presentation of findings, clear recommendations, and a structured modernization roadmap outlining concrete next steps and strategic options.

YOUR DELIVERABLES

You will receive a fully documented analysis within the PITSS App, including:

- Reliable key metrics
- Transparent assessment of risks and optimization potential
- A structured modernization recommendation
- A clearly defined roadmap for next steps

This enables strategic budget allocation, early risk identification, and informed decision making, whether you choose to initiate a pilot project or proceed with a phased migration approach.
